

INTERNATIONAL BASIC MUSCULOSKELETAL ULTRASOUND COURSE AND BASIC MRI ANATOMY

25th and 26th March 2012(16 hours of CME)

General Information

This course fulfills the requirements for EULAR Basic Musculoskeletal Ultrasound Course and will be certified by the Malaysian Association of Sports Medicine. It is suitable for Radiologists, Rheumatologists, Sports Medicine Physicians, Rehabilitation specialists, Pain specialists and Orthopaedic Surgeons and Trainees who want to learn Musculoskeletal Ultrasound Anatomy and MRI Anatomy so they can show patients abnormalities reported by radiologists. It is also suitable for physicians who want to buy a medium end ultrasound machine for screening to ensure they have the correct diagnosis to institute appropriate therapy. A range of ultrasound machines will be available to test for yourselves. The course will reduce unnecessary referrals for MSK MRI which can be solved by using MSK ultrasound. Separate sessions for specific learning in Rheumatology and Rehabilitation

The course will emphasize practical tips and pearls not found in textbooks. The faculty consists of well-established teachers and trainers from South East Asia. Accurate diagnosis based on clinical history and imaging findings will be highlighted. Unlike other courses, this course teaches MRI correlation of ultrasound findings. It assists physicians to recognise standard ultrasound images and abnormalities so that referral or screening with ultrasound rather than MRI can be made.

In addition to a worthwhile course, the location of the conference hotel at the heart of the golden tourist beach area of Batu Ferringhi in Penang, will certainly make your trip more memorable.

Faculty: All trained Musculoskeletal Ultrasound specialists.

Prof Dr John George FRCR(Course Director- Sports Medicine)
